Git Commands Cheat Sheet

Basic, HEAD, branch, repository, remote and teamwork commands

Basic Git Commands

`git add folder-name`	To add a project folder to the staging area.
`git commit -m "message"`	To save new changes in a commit.
`git status`	To show the current status of files.
`git restore .`	To discard all unstaged changes.
`git restore file-name`	To discard changes in a specific file.
`git show commit-id`	To show details of a specific commit.
`git diff`	To show differences between the working directory and the staging area.
`git diff --staged`	To show differences between the staging area and the last commit.
`git log --oneline --all`	To show all commits in a short format and display branch positions.

HEAD Commands

`git checkout HEAD~1`	To move to the previous commit.
`git checkout HEAD~number`	To move to a specific number of commits back.

Branch Commands

`git branch branch-name`	To create a new branch.
`git switch branch-name`	To switch to another branch.
`git checkout -b branch-name`	To create and switch to a new branch.
`git branch`	To show all local branches.
`git merge branch-name`	To merge another branch into the current branch.
`git checkout branch-name`	To switch to an existing branch. If the branch does not exist, Git shows an error.

Repository Commands

`git init`	To initialize a new Git repository and create a .git folder.
`git rm --cached file-name`	To remove a file from the staging area and Git tracking while keeping it locally.

Remote Commands (GitHub)

`git remote add origin repository-url`	To connect the local project to a remote repository.
`git push origin branch-name`	To push a local branch to the remote repository.
`git fetch origin branch-name`	To download updates from a remote branch without merging them.
`git merge origin/branch-name`	To merge remote branch changes into the current branch.
`git pull origin branch-name`	To fetch and merge changes from a remote branch in one command.
`git push --set-upstream origin branch-name`	To push a branch and set its upstream branch for easier future push and pull commands.

Teamwork Commands

`git clone repository-url`	To create a local copy of a remote repository.
